SURESH KUMAR N

Full Stack Developer | Java, Spring Boot, Node.js, Angular, React.js | 3+ Years

Chennai, India | +91 82200 36016 | sureshnarayanan122@gmail.com | linkedin.com/in/suresh-kumar-bbb113253

PROFESSIONAL SUMMARY

Full Stack Developer with 3+ years of experience delivering secure, bilingual (English/Arabic) e-government platforms for the Government of Oman. Strong in **Java, Spring Boot and Microservices** on the backend and **Angular and React.js** on the frontend, with production work on **Node.js (Express.js), MySQL and MongoDB**. Shipped 3 government platforms end to end in Agile (Scrum) teams: REST API design, JWT/RBAC security, relational and NoSQL data modelling, approval workflows, unit testing and CI/CD. Integrates Generative AI (LLM APIs) into real business flows such as contract summarisation and document classification.

Core strengths: REST API Design · Microservices · Spring Security & JWT · RBAC · Angular (Signals, SSR) · React.js & Redux · MySQL Schema Design · MongoDB · Generative AI / LLM Integration · Unit Testing · CI/CD · Agile (Scrum)

TECHNICAL SKILLS

Languages: Java, JavaScript (ES6+), TypeScript, SQL, HTML5, CSS3, SCSS

Backend (Java): Spring Boot, Spring MVC, Spring Security, Spring Data JPA, Hibernate, Maven

Backend (Node.js): Node.js, Express.js, Mongoose, RESTful APIs, Microservices, JWT, RBAC, WebSockets

Frontend: Angular (v9 to v22), RxJS, Signals, Standalone Components, SSR, Reactive Forms, Angular Material, React.js, Redux, React Hooks, Next.js, Tailwind CSS, Bootstrap

Databases: MySQL, MongoDB, Snowflake, Database Design, Query Optimization, Indexing

Generative AI: LLM API Integration (OpenAI, Claude), Prompt Engineering, AI Chatbots, AI Document Processing, Claude Code

Testing: JUnit, Mockito, Jasmine, Karma, Vitest

DevOps & Tools: Git, Jenkins (CI/CD), Postman, Jira, IntelliJ IDEA, VS Code

Other: i18n & Arabic RTL, SEO (JSON-LD), WCAG Accessibility, Agile (Scrum), Code Reviews

PROFESSIONAL EXPERIENCE

Full Stack Developer — Business Gateways International, Chennai | Jun 2023 – Present

Built and shipped 3 bilingual (English/Arabic) e-government platforms for the Government of Oman across Java, Node.js, Angular, React.js, MySQL and MongoDB.

1. JSRS — Joint Supplier Registration System (Oman)

Tech Stack: Java, Spring Boot, Spring Security, Spring Data JPA, Hibernate, Microservices, Angular, TypeScript, RxJS, MySQL, JWT, LLM API, JUnit, Mockito, Maven, Jenkins

- Delivered 5 business modules (Enterprise Admin, Company Profile, Contract Management, JStore, Sky Cards) as Spring Boot microservices with Angular front ends on MySQL.
- Designed RESTful APIs in a layered Controller–Service–Repository architecture with DTO validation and centralised exception handling.
- Secured all 5 modules with Spring Security, JWT authentication and role-based access control (RBAC), enforced in the UI through Angular route guards and HTTP interceptors.
- Designed normalised MySQL schemas and Spring Data JPA / Hibernate repositories for CRUD flows; wrote optimised SQL queries for module reports.
- Built AI-assisted contract review: a Spring Boot service calls an LLM API to summarise contracts and highlight key dates, values and obligations for reviewers.
- Built reusable Angular components with Reactive Forms, RxJS-based services and lazy-loaded modules to keep screens in sync with server state.
- Wrote JUnit and Mockito unit tests for services and controllers; shipped Maven builds through Jenkins CI/CD.

2. RABT — Industrial Supplier Registration & Certification Platform (Oman)

Tech Stack: Node.js, Express.js, Angular 22, TypeScript, Signals, SSR, MySQL, REST APIs, Microservices, Tailwind CSS, AI Chatbot, Claude Code, Vitest

- Led the migration of the public website from Next.js to Angular 22 with SSR and Signals: 12 routes and 47 standalone components, ready for testing in one week using AI-assisted development (Claude Code).
- Built Node.js (Express.js) REST APIs on MySQL for reCAPTCHA-secured registration and contact forms, live platform statistics and tender listings.
- Engineered 2 end-to-end approval workflows (supplier registration and certification) spanning Angular review screens, REST APIs and MySQL status tracking.
- Implemented English/Arabic routing with automatic RTL switching across 338 translated UI strings, plus SEO meta tags, JSON-LD structured data and a WCAG accessibility menu.
- Built the bilingual Sustainability module (10 Angular components, 64 translated strings) and revamped the supplier dashboard with profile-completeness scoring across 4 areas.
- Integrated a bilingual AI chatbot for supplier support, deferred to browser idle time so it never delays first page load.
- Wrote 59 Vitest unit tests covering routing, SEO and form logic.

3. NSS — National Subsidy System (Oman)

Tech Stack: Node.js, Express.js, React.js, Redux, MongoDB, Mongoose, REST APIs, Microservices, JWT, LLM API, Chart.js, ApexCharts, Jenkins

- Developed subsidy application modules in React.js with reusable components, Hooks and Redux state management.
- Built Node.js (Express.js) REST APIs for JWT authentication and document upload/download, and connected the React front end to backend microservices.
- Designed MongoDB collections and Mongoose schemas for applicants, applications and documents, with indexes for frequent lookups.
- Integrated AI document checks into the upload flow: a Node.js service sends documents to an LLM API to classify the document type and flag missing details before manual review.
- Wrote MongoDB aggregation pipelines feeding Chart.js and ApexCharts dashboards for subsidy reporting.
- Improved page speed, WCAG accessibility and cross-browser responsiveness; shipped releases through Git and Jenkins CI/CD.

KEY ACHIEVEMENTS

- Delivered 3 production government platforms for Oman within 3 years, covering Java, Node.js, Angular and React.js stacks.
- Migrated a live public website to Angular 22 SSR (12 routes, 47 components) in one week using AI-assisted development.
- Shipped 2 production Generative AI features (contract summarisation, document classification) inside real approval workflows.
